

# Equipment Technical Bulletin

## New Version of ManageNet

### PROBLEM

Some bugs have been identified in the ManageNet 3.1 software. The most troublesome of these bugs (that significantly impact the functionality of the software) have been fixed in ManageNet 3.11.

### SCOPE

This issue is specific to ManageNet 3.1. Older versions of ManageNet may not have these problems.

### SYMPTOMS

The following symptoms have all been fixed in the latest version of ManageNet, version 3.11:

- When ManageNet 3.1 is set to combine chemicals with exactly matching names and to not combine classifications at all, attempting to generate a **Chemical Usage by Chemical** or a **Chemical Cost by Chemical** graph does not work.
- When the auto-logging process has completed, a dialog pops up to indicate that details may be found in the ManageNet log file but the location of the log file given is incorrect.
- The size of the **Production Summary Report**, the **Daily Totals Report** and the **Chemical Use Report** windows may be too large to use on some computer screens.
- The default location of the **Edit Auto-Logging Script** window puts it off the edge of the screen on some computers, making it appear as if ManageNet has locked up.
- When set to combine classifications (either by matching name or by identical number), the “All Dispensers” checkbox on the **Production Summary Report** dialog does not work correctly, reporting on only the first dispenser.
- If the **Main** or **Logged Data** windows are maximized (or manually sized to completely fill the screen) the next time ManageNet is run the window will be offset towards the lower right corner of the screen.

### SOLUTION

All of these issues have been resolved with ManageNet 3.11.
